

Heavy Light FZ Lady

Traditional Heavy Light FZ suit has got a new model designed for ladies. In design there has been paid special attention to female body figure and suit is two-coloured. Otherwise the suit is similar to traditional Heavy Light FZ in its details.

Heavy Light Cordura FZ follows in its product development the Heavy Light-philosophy, which says that even the hardest and demanding work while wearing the suit takes place above the surface. That is one the reasons, an addition the durability and modifiability, why so many militaries choose it as a training suit.

HL Cordura FZ has been made of an extremely durable Cordura trilaminate. Despite of it's durability is has ergonomic features of its own class. Ergonomically fitting neoprene hood and the face seal allows the use both with half and full-face masks. The swivelling inlet valve reduces the stress on the hose.

The front zipper allows you easily to dress the suit without outside help. The cover on the zipper protects the jacket from rubbing and keeps the zipper clean from sand and dirt.

The patented seam structure, that is based on the Flat Seam-technology, makes the suit flexible and durable. The seam is taped both in- and outside. Because of this technology the multiple layers can be avoided and even the strongest and hardest materials can be sealed. You feel the difference immediately and after years of use.

Inside the suit there are integrated braces and together with the crotch strap they form a telescope waist. Thanks to this telescope waist construction. the ergonomomy of the suit feels like a normal cloth.

D-rings inside the pockets, to which for example a light can be attached. Heat pressed knee, back and elbow reinforcements. 4 mm neoprene boots with latex surface reduce the need for extra insulation. Right sizing prevents additional air from getting into the boots, which would create buoyancy. Heel strap retainers keep the fins safely in place.

Technical Details

- Front zipper with the zip cover
- Seam structure: doubleside taped patented seam structure
- Material: black-red trilaminate 230g/m²
- Integrated black 5mm neoprene hood
- Face seal 4mm sandwich-neoprene
- Automatic outlet valve of low profile type, with filter
- Swiveling inlet valve (INT)
- Heat pressed knee, back and elbow reinforcements
- 4 mm neoprene boots with latex surface
- Integrated braces, crotch strap and loops for drying
- Latex neck seal
- Wrist seals are made of latex. Bottleneck shaped with protection.
- Two large pockets with D-rings
- Includes carrying / storage bag
- Includes inlet house, cap, zip wax, talcum bottle and repair patches

Accessories

- Relief zipper
- Pee valve
- Pockets for knife, light, (other than std), compass or map or thigh pocket.
- Integrated independent air system for suit gases fitted on the thigh (argon)
- Attached gloves and / or wrist rings
- The standard boot can be replaced by a sock made of 4 mm compressed neoprene (to be used with our Tactical Trek Boots) or with the light model Tech Dry boots
- Can be made with separate hood
- The size and / or model of the boots, hood, and seals can be chosen when ordering
- The valve and hose type can be chosen to fit the coming use

Type approvals

- CE-certificate

Size

- XS, S, M, L
