

# Ursuit Next-To-Skin

\*\*Ursuit Next-to-Skin. A technical undersuit manufactured of Bioactive Coolmax material. This material is made up of two different threads, Trevira Bioactive and Coolmax. Both threads are 100% polyester.

\*\*/n /nUrsuit Next-to-Skin. A technical undersuit manufactured of Bioactive Coolmax material. This material is made up of two different threads, Trevira Bioactive and Coolmax. Both threads are 100% polyester.

The Ursuit Next-to-Skin undersuit is designed especially to be used underneath a dry suit, to be worn next to the skin. The skin remains dry and cool even during and after a hard exercise. Between the Next-to-Skin undersuit and the dry suit we recommend the use of an X-TEX® Finnfill Light or Heavy thermal undersuit, to create the necessary thermal insulation.

The Trevira Bioactive microfibre thread contains silver ions, that protect against bacteria. The silver ions are placed so closely that they prevent the growth of bacteria. By this, the product remains hygienic and no smell will arise. The microfibre thread efficiently removes humidity, it dries fast and is soft and light even when damp.

The Coolmax thread is made of Dacron polyester fibre, which does not absorb humidity. This material literally pushes away humidity from the skin and leads it to the surface of the cloth, where it evaporates quickly.

The Bioactive Coolmax material consists of about 50% Trevira micro Bioactive thread, and 50% Coolmax thread, making the most out of the advantages of each.

Washing instruction for the product: 60C, without rinsing agent. No drying machine, no bleaching.
